

Nikita D. Bhosale

TEA 17

Practical No : 9.

Aim : Design & develop any web applⁿ using.
angular JS

Problem statement : create an application for
bill payment record using Angular JS.

Theory :-

- Angular JS is open source web applⁿ framework
It was initially created in 2009 by Misko Hevery
& Adam Abrons
- It presently kept by google. Its most recent
adaption is 1.2.21. Angular JS is auxillary
system for dynamic web applⁿs
- It gives you a chance to utilize HTML as layout

dialect & gives you a chance to stretchout HTML's linguistic structure to express your applⁿ part painly & compactly

* General feature :-

- Angular JS is a productive system that can make Rich Internet Applⁿ (RIA)
- Angular JS gives designers a choices to make customer side applⁿs
- Applⁿ written in angular JS are cross program agreeable.
- It is open source, totally free & utilized by a great many engineers
- By & large Angular JS is a system to assemble expensive scale; elite & simple to keep up web applⁿ

* Model-view controller :-

① Model :- It is most minimum level of example in charge of looking after information

② view :- It is charge of showing all or part of info to the client.

③ controller :- It is a product code that controls the connection between model & view.

conclusion :-

This assignment is helpful to understand feature of Angular JS Mucmodel structure & its use in advanced web programming is studied.
